

## aquarium

Goldfish get LARGE and should be housed in an appropriate sized aquarium or even a pond. Goldfish are a carp species and can easily reach 16+ inches! Generally they will require a 55 gallon aquarium at minimum, but increased as they grow.

## temperature

Goldfish prefer cooler temperatures, sitting around 65F - 70F. Goldfish should not be kept with tropical fish as the temperature would be too hot for them. When introducing goldfish to a new aquarium, float the unopened bag for 10 minutes.

## diet

Goldfish food can come in pellets or flakes. Feed only one a day, what the goldfish can eat within 10-20 seconds. Overfeeding can cause water to become polluted. Ideal feed sinking food, as air in air can harm oldfish.

## shopping list

- appropriate sized aquarium
- goldfish food
- water conditioner
- gravel & decorations
- net
- thermometer
- book about goldfish

## fun facts

### average size

2 to 18 inches long, depending on variety

### average life span

up to 10 years

### misc. information

goldfish produce more waste than other fish

check water quality at least once a week

10-25% of the total volume of water should be changed every two to four weeks, or as needed
